

# INTEGRA HARVESTING BELT

The Integra harvesting belt has a large ground clearance and can therefore be used perfectly for the harvest of tall crops such as peonies, rockets, alliums, artichokes and many other flowers.

Due to its long length, the Integra harvesting belt is ideal for harvesting fields with fixed driving paths. In combination with a box rotation system, one can speak of a continuous process and the best results are achieved. The options with regard to the box rotation system are endless, you can contact us for more information.
